

# KEYLEX MECHANICAL DIGITAL LOCKS

Safety in numbers

500 - MINI

2100 - Heavy Duty

Mortice Sash Lock

Mortice Deadlocking Lock

Tubular Deadlocking Latch

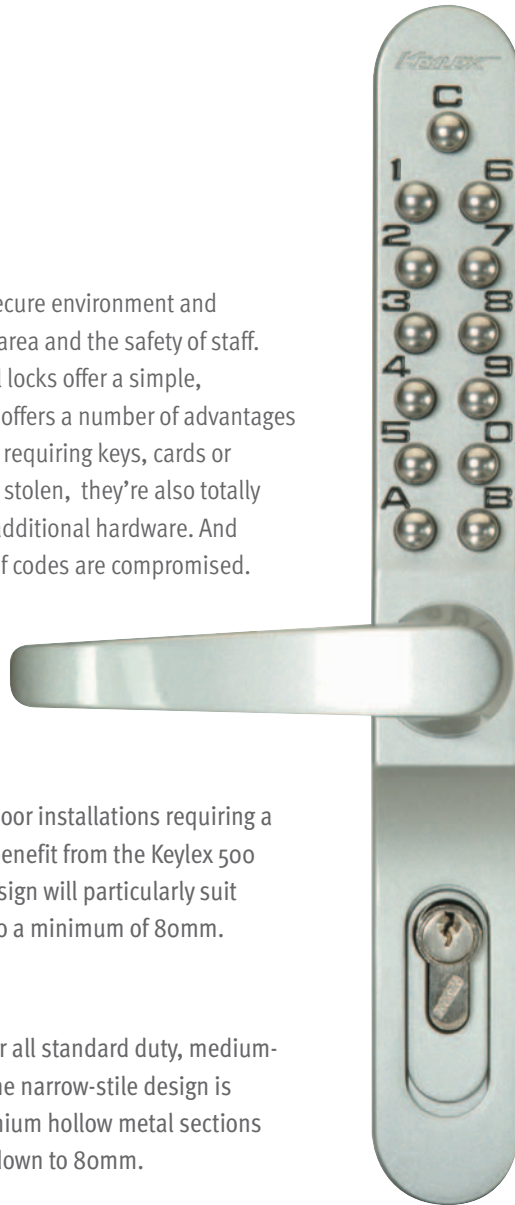

Access control is vital to providing a secure environment and ensuring the integrity of a building or area and the safety of staff. Our range of Keylex mechanical digital locks offer a simple, convenient and effective solution and offers a number of advantages over keyed locking systems. While not requiring keys, cards or tokens which can be damaged, lost or stolen, they're also totally self-contained and don't require any additional hardware. And reinstating security is quick and easy if codes are compromised.

**500 – MINI**

Standard duty, low-security internal door installations requiring a high quality locking mechanism will benefit from the Keylex 500 mechanical digital lock. Its narrow design will particularly suit timber doors with stile widths down to a minimum of 80mm.

**800 – LIGHT DUTY**

The Keylex 800 is the lock of choice for all standard duty, medium-security internal door installations. The narrow-stile design is particularly suited for use with aluminium hollow metal sections and will complement all stile widths down to 80mm.

700 – Medium Duty

800 – Light Duty

**700 – MEDIUM DUTY**

For high-security exterior door installations and on any door where a flexible euro profile keying system is required, the integral slipping clutch mechanism and narrow-stile design of the Keylex 700 make it the ideal choice for use with aluminium hollow metal sections and stile widths as low as 43mm.

**2100 – HEAVY DUTY**

The Keylex 2100 can be used on all external door installations and any door where heavy traffic or extreme use and misuse is expected. The proven design, with its built-in slipping clutch mechanism, will withstand all but the most violent attack and can be expected to provide many years of service.
